Sheridan College | EDGE Hub – B290

4226 Duke of York Blvd, Mississauga, Ontario

Hello Program Coordinators,

I am writing to express my interest in one of the 40 co-op / WIL on the EDGE positions for Fall 2026 to satisfy the co-op requirement for my program and help further expand my skills and experience. I recently completed the course work for Sheridan's four-year "*Honours Bachelor of Computer Science: Specialty in Game Engineering*" program and am confident the wide range of skills and knowledge acquired through my program would be an asset in supporting applicable real projects with entrepreneurs and startup founders.

I work well in a team and am confident in my leadership abilities as demonstrated during my involvement as the lead of a three-person team in a Capstone project to develop a computer game *Oregon's Fall* over the span of three courses to showcase our team's knowledge on game design and principles. I took the lead in planning the concept, mapping out core features and requirements and keeping everyone on track, using tools like Jira and Visual Paradigm to help manage workloads and map out use cases in the second phase. On the technical side, I developed the travel mechanics for this game, implementing a Nav-Mesh system that allows players to select map destinations and automatically calculate an optimal route.

Two coursework projects showcase my game engineering background. The multiplayer *Tanks* project is a two-player game built on server-client architecture with custom room management for lobby handling, and featuring synchronized player movement, simultaneous shooting, and a destructible environment. *Blind, Mute, Deaf* is a custom project created for my multiplayer course where I integrated Photon Voice to explore proximity chat and muting to force players to work together with main game features removed.

I enjoy expressing my creativity and am open to new experiences. I am currently writing a sci-fi novel, as well as developing new board games, which I enjoy testing on my family. My goal is to eventually adapt an optimized version of one of my board games into a digital experience, a concept I previously explored when generating custom boardgames in Minecraft and Fortnite with friends. I also enjoy creating cryptic crossword clues and puzzles.

I invite you to peruse my portfolio (see top of page) for examples of my work and projects.

Thank you for your time and consideration. I look forward to discussing how my skills, knowledge and creativity could help support EDGE projects.
